E-health.albania

User Scenarios

Receptionist Registering a New Pediatric Patient

- Receptionist logs into the HMS dashboard.
- Selects "Register New Patient" from the navigation menu.
- Enters patient personal details: name, date of birth, gender, national ID, phone, address.
- Selects patient category: Pediatric (age detected as 8 years).
- Enters insurance information and submits the form.
- System validates all fields, generates Patient ID P-2026-0142, creates an empty medical record.
- Receptionist receives on-screen confirmation. Patient is ready to be scheduled.

Doctor Searching for a Patient Before Consultation

- Doctor logs in and selects "Search Patient".
- Enters "Arjana Doci" in the search field.
- System returns two matching records; doctor selects the correct one.
- Patient's full medical history, active medications, and recent lab results are displayed.
- Doctor proceeds to add a new consultation note.

Scheduling a Follow-Up Appointment

- Receptionist searches for patient "Ilir Hoxha" (ID P-2026-0089).
- Selects "Schedule Appointment".
- Chooses appointment type: Follow-Up.
- Selects Dr. Mira Kola; views her calendar — next available: 25 Apr 2026 at 10:00.
- Confirms the booking.
- System saves the appointment, reserves the slot, sends SMS confirmation to patient.

Doctor Adding Diagnosis After Consultation

- Doctor opens patient record for Besa Hana.
- Reviews previous diagnoses, medications, and vitals.
- Enters ICD-10 code J06.9 (Upper Respiratory Infection) with clinical notes.
- Prescribes Amoxicillin 500 mg; system checks for penicillin allergy — none found.
- Saves diagnosis and prescription.

- Medical record updated; audit log records the change; prescription sent to pharmacy.

Failed Login and Account Lockout

- User enters correct username but incorrect password — error message displayed (attempt 1).
- User retries four more times with wrong password.
- After 5th failed attempt, system locks account.
- User sees: "Account locked. Please contact your administrator."
- Admin unlocks the account via User Management panel.

Doctor Creating Electronic Prescription

- Doctor completes consultation for patient Agron Shehu.
- Selects "Create Prescription" linked to today's diagnosis.
- Adds Metformin 500 mg, twice daily for 90 days.
- System checks drug interactions — no conflicts detected.
- Doctor confirms; prescription saved and transmitted to Pharmacy Plus API.
- Pharmacy receives prescription; patient notified via SMS.

Nurse Recording Vaccination for Pediatric Patient

- Nurse opens patient record for 2-year-old Eni Cela.
- Navigates to Vaccination Calendar — system shows MMR vaccine due today.
- Nurse administers vaccine; records batch number LOT-2026-MMR-004 and date.
- System marks MMR as administered, schedules booster in 4 weeks.
- Automated reminder email sent to parent's registered email.

Recording Pediatric Growth Measurements

- Nurse weighs and measures 5-year-old Luka Popa at routine check.
- Enters height: 108 cm, weight: 18.5 kg.
- System calculates BMI: 15.9; plots on WHO growth chart.
- Height at 45th percentile — within normal range.
- Growth record updated; no flag raised; data visible to assigned doctor.

Administrator Generating Monthly Activity Report

- Admin logs in and navigates to Reports module.
- Selects Report Type: Monthly Appointments Summary.
- Sets date range: 01 Apr 2026 – 30 Apr 2026; applies filter: All Doctors.
- Clicks Generate — system queries database and compiles report in 3 seconds.

- Admin previews report showing 412 appointments, 38 cancellations, 5 doctors.
- Exports report as PDF and emails to the Health Centre Director.

Lab Technician Uploading Blood Test Results

- Lab technician completes processing of blood panel for patient Dritan Aliu.
- Logs into HMS and navigates to Lab Orders.
- Locates order LO-2026-0388 for patient Dritan Aliu.
- Uploads results file (PDF) and enters key values manually: HbA1c 7.4%, WBC 6.2.
- Submits — system links results to patient record and timestamps entry.
- Dr. Kola receives in-system notification: "Lab results available for Dritan Aliu."

Processing Billing After a Specialist Consultation

- Admin opens Billing module after Dr. Basha's consultation with patient Mirela Çoku.
- Selects services rendered: General Consultation + ECG.
- System auto-calculates total: 2,500 ALL; generates invoice INV-2026-0471.
- Admin enters patient insurance policy number; system validates with insurer API.
- Submits insurance claim; system assigns reimbursement code RMB-2026-0471.
- Patient receives itemised bill via SMS; insurer receives electronic claim.

Issuing Referral to Cardiology Specialist

- Doctor reviews 67-year-old patient Fatos Hoxha's ECG results — abnormal finding.
- Selects "Issue Referral"; chooses Cardiology at University Hospital Tirana; sets urgency: High.
- Attaches last 3 diagnoses, current medication list, and ECG PDF.
- Confirms and submits.
- System transmits referral package via secure API; logs action with timestamp.
- Receiving hospital system acknowledges receipt; patient notified by SMS.

Updating Senior Care Plan for Diabetic Patient

- Doctor opens Senior Care dashboard for 72-year-old patient Vera Leka.
- Reviews chronic disease panel: Type 2 Diabetes, Hypertension, Osteoarthritis.
- Notes HbA1c rising trend over last 3 visits; updates insulin dosage in care plan.
- Schedules automated follow-up in 4 weeks; adds nutrition referral note.
- System flags comorbidity risk: Hypertension + Diabetes — sends alert to assigned nurse.
- Care plan saved; follow-up reminder queued for dispatch 7 days before appointment.

Doctor Recording Mental Health Assessment

- Doctor opens patient record for Klajdi Mema, presenting with persistent low mood.
- Navigates to Mental Health module; selects PHQ-9 Depression Assessment.
- Enters patient responses; system calculates total score: 16 (Moderately Severe Depression).
- Doctor records clinical observations and prescribes initial SSRI therapy.
- System flags high-risk score; prompts doctor to schedule 2-week follow-up.
- Assessment saved with timestamp; linked to patient medical record.

Scheduling a Physiotherapy Programme

- Doctor diagnoses lower back injury for patient Sokol Gjoka after consultation.
- Navigates to Physiotherapy module; links programme to diagnosis ICD M54.5.
- Sets treatment plan: 10 sessions, twice weekly for 5 weeks.
- System schedules sessions and checks physiotherapy slot availability.
- Sokol receives SMS with session calendar.
- After each session, nurse records attendance and progress notes; system updates treatment tracker.

Creating a Neonatal Record at Birth

- Nurse registers newborn in HMS immediately following delivery.
- Selects New Neonatal Record; links to mother's record (ID P-2024-0055, Elona Gashi).
- Enters birth weight: 3,210 g; APGAR score at 1 min: 8, at 5 min: 9.
- Records neonatal hearing screening: Pass; metabolic screening: Pending.
- System creates patient record ID P-2026-1001; sets category: Pediatric; initialises vaccination calendar with BCG due within 24 hours.
- Doctor reviews record and confirms clinical status.

Scheduling Female Screening (Pap Test)

- System identifies female patient Bora Dema, 42 years, as overdue for Pap test (last: 2023).
- Nurse opens Gender-Specific Care module; confirms eligibility.
- Schedules Pap test appointment for 28 Apr 2026.
- Patient receives automated SMS reminder 24 hours before appointment.
- After appointment, nurse records result: No abnormality detected.
- System schedules next Pap test in 3 years; updates screening record.

Patient Self-Booking via Portal

- Patient Gent Hoxha logs into the patient portal at e-health.albania.
- Selects Book Appointment; chooses appointment type: General Check-Up.
- Browses available doctors; selects Dr. Ardita Cela.

- Views calendar — selects 29 Apr 2026 at 09:30.
- Confirms booking.
- System reserves slot, prevents double-booking, and sends SMS and email confirmation to Gent.

Patient Viewing Their Medical Record Online

- Patient Mirela Shehu logs into the patient portal.
- Navigates to My Medical Record.
- Views Diagnoses section — sees last 5 consultations with ICD codes and doctor notes.
- Opens Prescriptions tab — reviews active medications and dosage instructions.
- Opens Lab Results — views blood panel uploaded 15 Apr 2026.
- System logs access event in audit trail; no editing options are displayed.

Admin Creating a New User Account

- Admin logs in and navigates to User Management.
- Selects Create New User.
- Enters details: Name: Dr. Arta Boci, Role: Doctor, Username: aboci, Email: a.boci@ehealth.al.
- Assigns Doctor role — system auto-applies RBAC permissions for clinical modules.
- Saves account; system generates temporary password and sends activation email.
- New user appears in the active users list; audit log records account creation by Admin.
